Sample Gas Station Owner/Operator Self-Inspection Log

(This is an example of a log. You are not required to use it.)

Instructions: 1) Check nozzles and hoses for visible gasoline leaks on a regular basis. It is up to you to determine how often you should check for leaks so that you find them, not an inspector.

2) Keep a log of when you check for gas leaks, and ensure the log (and test reports) is accessible for inspection.

3) Immediately remove any defective equipment from service until repairs can be made.

DATE & TIME	RESULTS of check for gasoline leaks	DATE & TIME repair is made
	☐ OK ☐ Leak found and removed from service.	
	☐ OK ☐ Leak found and removed from service.	
	☐ OK ☐ Leak found and removed from service.	
	☐ OK ☐ Leak found and removed from service.
